## Sampling gradient and curl edge GPs

Proof. We focus on the case of gradient GPs. First, we can decompose the gradient kernel in terms of  $U_1 = [U_H \ U_G \ U_C]$  as

$$\boldsymbol{K}_{G} = \boldsymbol{U}_{1} \begin{pmatrix} \boldsymbol{0} & \\ \Psi_{G}(\boldsymbol{\Lambda}_{G}) & \\ \boldsymbol{0} \end{pmatrix} \boldsymbol{U}_{1}^{\top}.$$
 (B.9)

From a vector  $\mathbf{v} = (v_1, \dots, v_{N_1})^{\top}$  of variables following independent normal distribution, we can draw a random sample of gradient function as

$$\mathbf{f}_G = \mathbf{U}_1 \operatorname{diag}([\mathbf{0}, \Psi_G^{\frac{1}{2}}(\mathbf{\Lambda}_G), \mathbf{0}])\mathbf{v}$$
 (B.10)

where diag([a, b, c]) is the diagonal matrix with  $(a, b, c)^{\top}$  on its diagonal.

Therefore, their curls are

$$\operatorname{curl} \boldsymbol{f}_{G} = \boldsymbol{B}_{2}^{\top} \boldsymbol{U}_{1} \operatorname{diag}([\boldsymbol{0}, \boldsymbol{\Psi}_{G}^{\frac{1}{2}}(\boldsymbol{\Lambda}_{G}), \boldsymbol{0}]) = \boldsymbol{B}_{2}^{\top} \boldsymbol{U}_{G} \boldsymbol{\Psi}_{G}^{\frac{1}{2}}(\boldsymbol{\Lambda}_{G}) = \boldsymbol{0}. \tag{B.11}$$

Likewise, we can show the samples of a curl GP are div-free.

## Posterior distribution of Hodge components

$$\begin{bmatrix} f_{H}(\mathbf{x}) \\ f_{H}(\mathbf{x}^{*}) \\ f_{G}(\mathbf{x}) \\ f_{G}(\mathbf{x}^{*}) \\ f_{C}(\mathbf{x}^{*}) \\ f_{C}(\mathbf{x}^{*}) \\ f_{D}(\mathbf{x}^{*}) \\ f_{D}(\mathbf{x}^{*}) \\ f_{D}(\mathbf{x}^{*}) \end{bmatrix} \sim \mathcal{N} \begin{pmatrix} K_{H} & K_{H}^{*} & K_{H}^{*} & K_{H}^{*} & K_{H}^{**} \\ K_{H}^{*\top} & K_{H}^{**} & K_{H}^{**} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & K_{G} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & & K_{G} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & & K_{G}^{*\top} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & & K_{G}^{*\top} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & & K_{G}^{*\top} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & & K_{G}^{*\top} & K_{G}^{*} & K_{G}^{*} & K_{G}^{*} \\ & & & K_{G}^{*\top} & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*} & K_{G}^{*\top} \\ & & & K_{H}^{*\top} & K_{H}^{*\top} & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & K_{H}^{*\top} & K_{H}^{*\top} & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & & K_{G}^{*} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} & K_{G}^{*\top} \\ & & & & & & K_{G}^{*} & K$$

where we represent the kernel matrices by  $K_1 = k_1(x, x)$ ,  $K_1^* = k_1(x, x^*)$  and  $K_1^{**} = k_1(x^*, x^*)$ , and likewise for the other kernel matrices. Given this joint distribution, we can obtain the posterior distributions of the three Hodge components as follows

$$f_H(x^*)|f_1(x) \sim \mathcal{N}\left(K_H^{*\top}K_1^{-1}f_1(x), K_H^{**} - K_H^{*\top}K_1^{-1}K_H^*\right)$$
 (B.27a)

$$f_G(x^*)|f_1(x) \sim \mathcal{N}\left(K_G^{*\top}K_1^{-1}f_1(x), K_G^{**} - K_G^{*\top}K_1^{-1}K_G^*\right)$$
 (B.27b)

$$f_C(x^*)|f_1(x) \sim \mathcal{N}\left(K_C^{*\top}K_1^{-1}f_1(x), K_C^{**} - K_C^{*\top}K_1^{-1}K_C^*\right)$$
 (B.27c)

From these posterior distributions, we can directly obtain the means and the uncertainties of the Hodge components of the predicted edge function.
